                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               à
Patent No. 567164

Patent No. 567164

GENERAL INFORMATION:

APPLICANT Takeshi SHIMOMURA et al.

TITLE OF INVENTION: No. 5677164el Protein and Gene Encoding Said Frotein

TITLE OF INVENTION: No. 5677164el Protein and Gene Encoding Said Protein

TUTRE OF INVENTION: No. 5677164el Protein and Gene Encoding Said Protein

TUTRE OF INVENTION: No. 5677164el Protein and Gene Encoding Said Protein

TORRESPONDENCE: 110 & Ponack

STREET: 05 SILteenth Street, N.W., #700

STREET: 805 Filteenth Street

COUNTRY: 10.S.A.

ZIP: 2000s

COUNTRY: 10.S.A.

SOFTWARE: SOO & Streage

COMPUTER: 1BM Compatible

OPERATION TYPE: 10508

SOFTWARE: Way 24, 1056

CURRENT APPLICATION DATA:

APPLICATION NUMBER: 105/08/448,937A

FILING DATE: NA 245

FILING DATE: NA 245

FILING DATE: NA Cheek, Jr.

RESISTRATION NUMBER: 3, 367

REFERENCE/DOCKET NUMBER:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 39, Application US/08883795A; Sequence 39, Application US/08883795A; Sequence 39, Application US/08883795A; Sequence 39, ApplicANT: Delcuve, Genevieve APPLICANT: Delcuve, Genevieve APPLICANT: Avang, Gregor TITLE OF INVENTION: Recombinant DNA Molecules and Expression TITLE OF INVENTION: Vectors for Tissue Plasminogen Activator NUMBER OF SEQUENCES: 39; CORRESPONDENCE ADDRESS: APPRESSE: BERESKIN & PARR STREET: 40 King Street West CITY: Toronco
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               45; AAC7446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic, hepatotropic, vulnerary; squences have activities such as: cytostatic, hepatotropic, vulnerary; antiporvulant; antiparkinsonian; noctropic, natidiabetic; hypotensive; cardiant; thrombolytic; coapulant; vasorropic, antidiabetic; hypotensive; dermatological; immunosuppressant; immunostimulant; activities antidiabetic; antidiabetic; hypotensive; dermatological; immunosuppressive, antidialemency; antidiabetic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an ORFX-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, graft vs host disease, cardiovascular disease, disorders, osteoarthritis, graft vs host disease, cardiovascular disease, cororage, systemic lupus erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune catilage damage, nocturnal haemoglobinuria, antidiflammatory disease; to enhance coagulation; to inhibit thrombosis; and as a contraceptive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                540

The present invention relates to a mutant of the DNA sequence encoding the protease (FSAP) that activates blood coagulation factor VII (FVII) and single-chain plasminogen activator, where at least one of the base changes G to C at mucleotide 1177 and G to A at nucleotide 1601 is present. The mutant sequences can be used in the treatment and prevention of bleeding disorders associated with inherited or acquired defects of blood coagulation factors V, VIII, IX, X, XI, XII, von Willebrand's factor and/or with antibodies against any of these proteins. The present sequence is the human FSAP protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               180

This is the amino acid sequence of the precursor protein of the inactive single chain form of a hepatocellular growth factor. The mature protein (AAR89196) has a mol. wt. of around 34 kD and is derived from the 96 kD precursor protein. The mature protein corresp. to residues 356-655 of the precursor protein. The inactive single chain form of the growth factor is activated by dimerisation of the mature protein. The active protein is a serine protease which can be used for the treatment of hepatitis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     126
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             203
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         169

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The modified t-PA has all/part of the kringle domains of native t-PA removed. The t-PA has functional properties superior to those of native tipA. It retains fibrin binding properties and interacts more slowly and inefficiently with plasminogen activator inhibitor(s) compared to native t-PA. It is obtd. in large anter. From a prokaryotic host. Modified to pis used for treating vascular disorders, eg deep vein thrombosis, pulmonary embolism, pertipheral arterial thrombosis, disseminated te-PA intravascular coaqulation, emboli from the heart or pertipheral arteries, associated with invasive cancers. t-PA is used at a dosage of 250000 to 5000000 units at a loading dose or in a deep vein thrombosis-pulmonary embolism, or 250000-7500000 units sor in a deep vein thrombosis-pulmonary infarction. (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New modified tissue plasminogen activator - with new encoding DNA, new DNA expression vector, useful for treating vascular disorders, e.g., pulmonary embolism arterial thrombosis.

The modified t-PA has all/part of the kringle domains of native t-PA removed. The t-PA has functional properties superior to those of native t-PA. It retains fibrin binding properties and interacts more alowly and inefficiently with plasminogen activator inhibitor(8) compared to native t-PA. Obtd. in large amts. from a prokaryotic host. Modified t-PA is used for treating vascular disorders, eg deep vein thrombosis, pulmonary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       508

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention comprises the amino acid and coding sequences of novel proteins. The DNA and protein sequences of the invention are useful as: markers for tissues in which the corresponding protein is preferentially expressed; as molecular weight markers on gels; as chromosome markers or tags; to identify chromosomes to map related gene positions; and to compare with endogenous DNA sequences in patients to identify potential genetic disorders. The present amino acid sequence represents a protein
                                                                                                                                                                                                                                                                                                                                                                                                                    New polynucleotides, useful for expressing recombinant proteins for analysis, characterization or therapeutic use, or as markers for tissues in which the corresponding protein is preferentially expressed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            74

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              8
                                                                                                                                                                                                                                                                                                     14;
                                                                                                                                                               This tPA variant has a deletion of amino acids Pro(466) to Leu(470) of the corresponding wild-type. The deletion is in the serine protease domain, making the variant more fibrin specific than the wild-type tPA. The variant also has a deletion of amino acids Cys(92) to Asp(179) of the wild-type sequence (1.e. Kringle I domain). See also AAR13917-R13921 and AAR14486. (Updated on 09-UAN-2003 to add missing OS field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  hybrid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The modified tPA molecules retain the fibrinolytic activity of natural tPA and are used to treat thrombotic diseases. The extra finger domain extends at the N-terminus to comprise amino acids 1-5 of native tPA. The tPA mutein can form part of a hybrid protein when linked to another fibrinolytically active protease so that the catalytic site of the hybric protein essential for fibrinolytic activity is optionally blocked by a removable blocking group. Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
